DRUG PRODUCTS

Over the past two decades, shortages of generic, injectable drugs critical to the lifesaving work of hospitals in the U.S. have become commonplace.

These shortages are so ubiquitous that hospitals and health care systems now maintain permanent drug shortage response teams that seek alternatives to unavailable drugs. As a result, time that hospital pharmacists, technicians, nurses and others would prefer to spend caring for patients is spent ensuring that the patients who most need short-supply drugs get whatever supply is available.

Civica brings together hospitals and drug manufacturers to work

collaboratively, ensuring a reliable supply of drugs for hospitals and predictable volumes for manufacturers. In addition to working with partners, we are in final stages of construction of a 140,000 square-foot sterile injectable manufacturing facility in Petersburg, Virginia.

55

HOSPITAL SYSTEM  
MEMBERS

Civica, a nonprofit generic drug company, was created to reduce and prevent drug shortages and the price spikes that can accompany them. Its mission, as driven by its governing board of hospital systems and philanthropies, is to make quality generic medicines accessible and affordable to everyone. Today, more than 55 health systems have joined Civica. They represent 1,500 hospitals and approximately one-third of all U.S. hospital beds. Civica has also begun to supply the U.S. Department of Veteran's Affairs and the U.S. Department of Defense.

The Civica plant is actively hiring and training team members and will soon employ nearly 200 people and will include disposable technology and advanced technology filling lines to produce vials and pre-filled syringes of essential medications, steam sterilization capability, automated visual inspection and packaging lines, and controlled temperature warehousing of raw materials and finished medications.

1,500

HOSPITALS

Civica was primarily created to improve the resiliency of the supply of essential medicines used in hospitals daily, often for critical care. The drugs we make are not those with the highest return on investment. Rather, they are the ones that are identified and prioritized by our health systems – by doctors and pharmacists on the front lines – as the medications most important for quality patient care.

We expect Civica Petersburg to be operational as early as 2024 after a highly regulated sequence of equipment / product testing and FDA reviews.

OF U.S. LICENSED  
HOSPITAL BEDS

**Ensuring a safe and stable supply of essential medicines for U.S. patients.** To date, over 145 million units of Civica medications have helped treat over 60 million patients.

Most recently, Civica announced its plans to manufacture and distribute affordable medications for consumers in an outpatient setting, including affordable insulin. Once approved by the FDA, Civica insulin will be available to people with diabetes at no more than \$30 per vial and \$55 per pack of 5 pens.
